Information Technology Solutions that Work for Your Business

MSEC has created proprietary valve and actuator digital walk-down sheets that let us collect both images and data from your critical valves & actuators. We collect process conditions when available.

All data is stored in our secure Valve Asset ID Database that we call **Valve AID™** for short.

This information is available 24/7 to assist you with both planned and unplanned maintenance and outages.

➢ **VALVE ASSET DATA COLLECTION**
Our team will collect all relevant data and pictures in the field with your on-site personnel for each site you request.

➢ **VALVE DATABASE MANAGMENT**
Your valve and actuator data is stored in a secure database managed by MSEC. If you purchase new products from MSEC, we will automatically update the database with the ordered items . You may send us data sheets on your new purchases from other vendors to enter into database if desired.

➢ **SOURCING FOR EMERGENCIES**
MSEC will use the information in the database to locate spare parts and replacements products during scheduled and unscheduled maintenance available 24/7.

➢ **CRITICAL SPARES MANAGEMENT**
Optionally, MSEC will develop with you a custom plan for critical spares management to procure and inventory parts that ensures you have them when you need them at the inventory location of your choice.

➢ **PROGRAM COSTS**
There is no initial charge from MSEC for the program. You will receive a summary report of all valve/actuator tags within 20-30 business days from the walk-down. You may purchase the detail data from MSEC on a per tag basis if needed.

Contact MSEC today to schedule your Valve AID™ walk-down to start saving time and money today!
